In order to run the backend Django server:
1. Pull the repository to your local.
2. Locate the `backend` directory in the terminal.
3. Run `'chmod +x startup.sh'` and `'chmod +x run.sh'` to make the scripts executable.
4. Run `'./startup.sh'` in the terminal.
5. Run `'./run.sh'` in the terminal

In order to run the frontend React server:
6. Locate the `'frontend'` directory in the terminal.
7. Run `'npm install'` in the terminal.
8. Run `'npm start'` in the terminal.
9. Run `'npm run build'` in the terminal. (No need to run this since we have already deployed the website.
